

The week before, we traded a bearish counter trend on AUDCAD. This week, we got a 5 timeframe buy signal on June 14 for a buying trend opportunity on the AUDCAD.

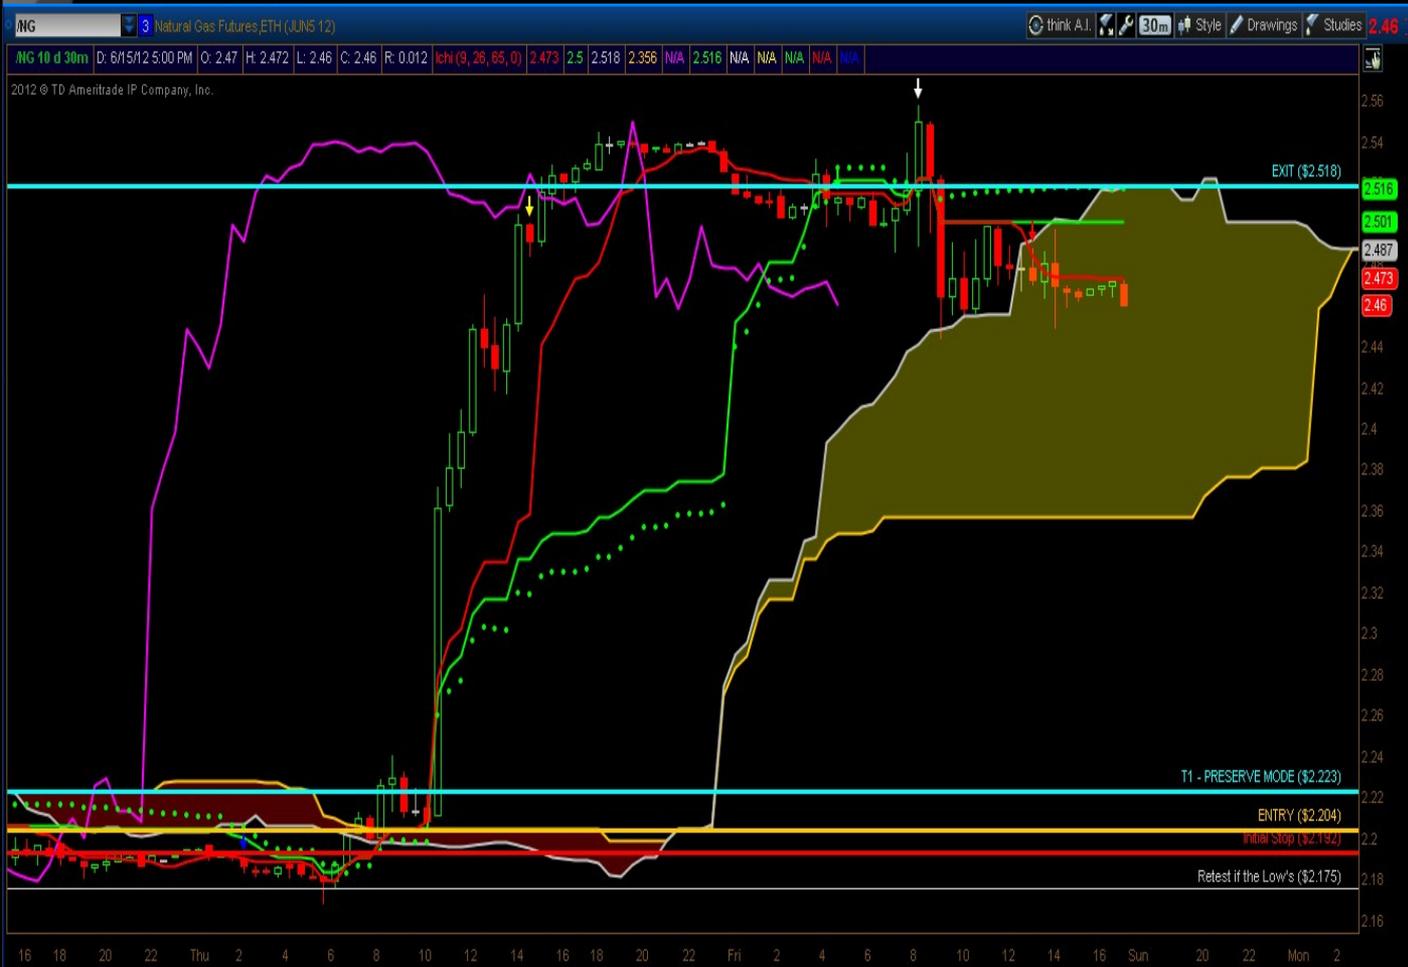

The Entry was 1.0235 with a stop of 1.0226 and a PRESERVE mode value of 1.0314. With these values, we would get a reward of 79 pips with a risk of 9 pips. A reward/risk of 877%.

We did a pull back trade to keep our risk low since the trade was in a consolidation pattern after a bullish trend on the higher timeframes.

No target was used because the higher timeframes are undergoing a major pull back.

We retest the lows for Natural Gas on Thursday at 2.175. The momentum is still not strong bearish so we started to look for a quick day trade on Natural Gas.

The chart is a 30m chart of Natural Gas Future Contracts. The Entry was 2.204 with a stop of 2.192 and PRESERVE mode of 2.223. This would give us a reward of 0.019 and a risk of 0.012. This would give us a worse case profit of 158%. We will go into PRESERVE mode at that value in order to protect our profits and try to get a higher reward/risk ratio.

On June 14th, price drastically moved up to a point, it blasted past our PRESERVE mode. This was good but this is not normal. We eventually exited the trade at 2.518. This gave us a profit of 2458%. This is NOT normal.

Below is a 2h chart of the US Stock Dominion Resources Inc, D. The stock is at a all time high and still has some potential to keep trending higher. The trade triggered this week as a pull back trade.

The trade was initially setup on 5/29/12 when we received a 5 timeframe Email Alert.

Here is the current chart with all the information. The entry was \$52.43 with a stop of 52.28 and a PRESERVE mode value of 53.59. The worst case potential reward will be to the PRESERVE mode value which will be 1.16. The initial risk will be 0.15. This would give us a reward/risk of 1.16/0.15=773% profit potential. This is worst case profit potential because when price gets to the PRESERVE mode, we are NOT going to exit the trade. Instead, we are going to tighten our stop to protect our profits.

On Monday June 12 at market open, price reached our entry and the trade was triggered. On June 14, we reached our PRESERVE mode value. The goal of PRESERVE mode is to protect your profit. The stop in PRESERVE mode would be 53.59 **which guarantees us at least 773%** unless the stock gaps overnight. If the trend continues to go up, the profit potential will keep on increasing past 773%.

If we didn't go into PRESERVE mode, the stop would be 53.23 which still guarantee us a profit of 0.80, 533% unless a overnight gap occurs.
